Contents

1 Overview 1

1.1 Introduction 1
1.2 A gallery of structured fluids 2
1.2.1 Self-organization 2
1.2.2 Rheology 4
1.2.3 Scaling 5
1.3 Types of structured fluids 6
1.3.1 Colloids 6
1.3.2 Aggregates 7
1.3.3 Polymers 7
1.3.4 Surfactant assemblies 9
1.3.5 Association 10
1.4 The chapters to follow 11
References 11

2 Fundamentals 13

2.1 Statistical physics 13
2.1.1 Thermal equilibrium 13
2.1.2 Probability and work 17
2.1.3 Lattice gas 21
2.1.4 Approach to equilibrium 22
2.2 Magnitude of a liquid's response 27
2.3 Experimental probes of structured fluids 31
2.3.1 Macroscopic responses 31
2.3.2 Probes of spatial structure 34
2.3.3 Probes of atomic environment 38
Solution to Problem 2.1 39
References 40

3 Polymer molecules 41

3.1 Types of polymers 41
3.1.1 Monomers 42
3.1.2 Architecture 43
3.1.3 Polymerization 45
3.2 Random-walk polymer 47
3.2.1 End-to-end probability 48
3.3 Interior structure 54
3.3.1 Scattering 56
3.4 Self-avoidance and self-interaction 61
3.4.1 Local and global avoidance 62

10/12/2003 14:18 3127025863 JFI PAGE 01/04

3.4.2 Estimating D 64
3.4.3 Self-interaction and solvent quality 67
3.4.4 Universal ratios 72
3.4.5 Polyelectrolytes 73
Appendix A: Dilation symmetry 75
Appendix B: Polymeric solvents and screening 79
References 82

4 Polymer solutions 83
4.1 Dilute solutions 83
4.2 Semidilute solutions 85
4.2.1 Structure 86
4.2.2 Energy 87
4.2.3 Concentrated solutions and melts 90
4.3 Motion in a polymer solution 90
4.3.1 Brownian motion of a sphere 90
4.3.2 Intrinsic viscosity 94
4.3.3 Polymer in dilute solution: hydrodynamic opacity 96
4.3.4 Internal fluctuations 98
4.3.5 Hydrodynamic screening 98
4.3.6 Semidilute diffusion 99
4.3.7 Semidilute self-diffusion without entanglement 102
4.3.8 Motion with entanglements 103
4.3.9 Stress relaxation and viscosity 105
4.4 Conclusion 109
Appendix A: Origin of the Oseen tensor 109
Solution to Problem 4.5 (Deriving permeability) 110
References 111

5 Colloids 113
5.1 Attractive forces: why colloids are sticky 114
5.1.1 Induced-dipole interactions 114
5.1.2 Solid bodies 116
5.1.3 Perturbation-Attraction Theorem 117
5.1.4 Depletion forces 120
5.2 Repulsive forces 122
5.2.1 Steric stabilization 123
5.2.2 Electrostatic stabilization 127
5.3 Organized states 132
5.3.1 Colloidal crystals 132
5.3.2 Lyotropic liquid crystals 133
5.3.3 Fractal aggregates 134
5.3.4 Anisotropic interactions 134

10/12/2003 14:18 3127025863 JFI PAGE 02/04

5.4 Colloidal motion 135
5.4.1 Electrophoresis 136
5.4.2 Soret effect 137
Appendix A: Perturbation attraction in a square-gradient medium 137
Appendix B: Colloidal aggregates 139
References 149

6 Interfaces 151
6.1 Probes of an interface 151
6.2 Simple fluids 153
6.2.1 Interfacial energy 153
6.2.2 Contact angle 156
6.2.3 Wetting dynamics 158
6.2.4 Surface heterogeneity 159
6.2.5 Other interfacial flows 160
6.3 Solutes and interfacial tension 161
6.3.1 Fluid mixtures 162
6.4 Polyatomic solutes 163
6.4.1 Polymer adsorption 163
6.4.2 Concentration profile 165
6.4.3 Hard wall 167
6.4.4 Kinetics of adsorption 168
6.4.5 Surface interaction 168
6.4.6 Flow 168
6.5 Conclusion 171
References 171

7 Surfactants 173
7.1 Introduction 173
7.2 Mixing principles 174
7.2.1 Positivity 175
7.2.2 Additivity 175
7.2.3 Ordering: like dissolves like 176
7.2.4 Reciprocity 176
7.2.5 Transitivity 177
7.2.6 Effect of permanent dipoles: water 177
7.2.7 Effect of charges: ionic separation 177
7.3 Surfactant molecules 178
7.4 Surfactants in solution: micelles 180
7.4.1 Open aggregation: wormlike micelles 182
7.4.2 Open aggregation: two-dimensional micelles 185
7.4.3 Aggregation kinetics 185
7.5 Micelle interaction 186
7.5.1 Energy of two-dimensional micelles 188
7.5.2 Energy to confine a fluctuating membrane 191

10/12/2003 14:18 3127025863 JFI PAGE 03/04

7.6	Mixing immiscible liquids: microemulsions	192
	7.6.1 Interfacial tension	195
	7.6.2 Emulsions and foams	197
7.7	Amphiphilic polymers	198
	7.7.1 Micelle size	199
	7.7.2 Other copolymers	201
	7.7.3 Polymeric amphiphiles in solution	202
7.8	Dynamics and rheology	203
	7.8.1 Wormlike entanglement and relaxation	204
	7.8.2 Rheology of lamellar solution	206
	7.8.3 Shear-induced restructuring	207
Appendix: Gauss–Bonnet Theorem		210
